

SignalBridge service review

Workshop summary | 16 July 2024 | Synthetic evaluation evidence

DRAFT - NOT APPROVED STRATEGY

Read the two columns separately: observed evidence is not the same as a proposed response.

What the workshop observed

- Six support agents and two supervisors described recent escalation work.
- Agents moved among CRM notes, a shared inbox, billing records, and direct messages.
- Fourteen of 40 sampled escalations had no named owner at one handoff.
- Customers sometimes repeated account and security details after a transfer.
- The review did not measure transfer time, customer trust, or resolution quality.

What the team proposed

- Create a shared case history with a visible owner and next action.
- Keep the CRM as the system of record rather than replacing it.
- Target a 20% reduction in internal transfers during a future pilot.
- Proposed vision: one accurate answer without making the customer retell the story.

The CRM decision was approved. The shared history, target, and vision remained proposals in this packet.

Decision register

Item	State	Decision owner
Keep CRM as the system of record	Approved	Product and engineering
Introduce one shared case history	Proposed	No decision owner recorded
Reduce internal transfers by 20%	Target for a future pilot	Operations sponsor
One answer without retelling	Draft experience vision	No approval recorded
